

# 2003 CAD 2D Architectural Final Problem

There is a great urban renewal taking place in downtown Smallville. The town was founded during the early 1800's, and was originally a small mining town.

The local bank would like to build a new branch on the Main Street corner. The president of the bank tells you they only require 2500 square feet of space, all to be on one floor. Your site is 80 feet by 100 feet; the 80 feet is the street front.

Design a floor plan that includes a lobby, teller space, three small offices, and one larger office. There must also be a kitchen/break area, a rest room for employees, a 4' x 4' x 8' safe, and a janitor's storage.

If you have time, show a front elevation to give the president an idea of what the bank will look like from Main street.
